Full-stack software engineer with depth across mobile, web, backend, and data systems - from architecture to production.

Education

University of Cincinnati **Aug 2022 – Aug 2024**
Master of Engineering in Computer Science *GPA: 3.85 / 4.0*

University of Cincinnati **Aug 2019 – Aug 2024**
Bachelor of Science in Computer Science *GPA: 3.98 / 4.0*

Experience

7WEST **December 2024 – September 2026**
Founding Engineer *Cincinnati, OH*

- Architected and built a **multi-tenant K-12 academic operations platform** end-to-end in **TanStack Start** and **Convex**, modeling org-scoped data, implementing role-aware auth wrappers, and shipping dedicated admin, teacher, student, and parent portals - reaching **4 live school pilots** and **6,000 provisioned accounts** from first commit in under **1 month**
- Owned product decisions across 4 live school pilots, using teacher and admin feedback to prioritize changes to gradebook, attendance, and reporting workflows
- Built a **React Native (Expo)** mobile app end-to-end as the sole engineer in under **2 months**, reaching **500+ active users** from **15+ universities** within **25 days**; implemented **OTP auth** via Resend, **Expo push notification** registration and deep-link routing, and **Cloudflare R2** signed URLs for media upload and retrieval
- Modeled the core social graph in **Convex** across community, following, and recommended feed sources; built direct and group messaging with read receipts, media attachments, and **push notification** deep-linking - turning re-engagement into retention loop for verified university communities
- Built a conversational **AI assistant** for the LMS using **TanStack AI** where any action available in the platform UI - creating assignments, taking attendance, updating grades - could be triggered entirely through chat, reducing staff onboarding time and eliminating the need to learn platform navigation

Kinetic Vision **May 2025 – Aug 2025**
Lead Full-Stack Engineer - Contract *Cincinnati, OH*

- Owned all frontend development and most schema definition for a **Procter & Gamble** ECRF application in **Next.js** and **GraphQL**, replacing manual and **Microsoft Access**-based dental product-testing workflows
- Designed a **schema-driven dynamic form architecture** using **JSON Forms** with custom renderers in Next.js - modeling both form schemas and submission data, implementing conditional visual logic, and automating score calculations across complex multi-surface study workflows
- Dockerized the application, led code reviews and **GraphQL**/schema-level technical decisions, and delivered the full project within a **2–3 month** client engagement

Tembo **May 2024 – Nov 2024**
Software Engineer *Cincinnati, OH*

- Migrated the majority of frontend data fetching from **RTK** and ad hoc fetch patterns to **React Query** on a hosted **Postgres** platform, improving caching behavior, reducing duplication across critical pages, and increasing feature development velocity
- Refactored **7 critical cloud-management pages** for instance visibility, metrics, and extension workflows; maintained a custom **UI library** and contributed **6 shared React components** used across the main platform and marketing site
- Implemented the frontend integration for **auto-pause** of inactive Postgres cloud instances, contributing to a feature associated with **roughly 25% lower operating costs**; introduced **Playwright** lifecycle tests covering instance creation, readiness checks, metrics display, and teardown

Kinetic Vision **Jan 2023 – Aug 2023**
Full Stack Engineer Intern *Cincinnati, OH*

- Contributed across multiple full-stack client applications on a shared **Next.js**, **Apollo Client**, **Nexus**, **Prisma**, and **PostgreSQL** stack - working across frontend, backend, and **GraphQL** schema layers on real client projects, for **P&G** and **J&J**
- Built **a dynamic breadcrumbs library** from scratch; contributed to reusable internal packages; wrote the business case for a **JFrog Artifactory** subscription that management approved and purchased
- Added **SSL certificate-expiry alerting** to an internal **Grafana/Prometheus** monitoring platform; built a **POC**, solo, that helped the company land the client; informally led two engineers on a project while participating in architecture strategy sessions

Digital Scholarship Center **Jan 2021 – Aug 2022**
Software Engineer Intern *Cincinnati, OH*

- Built full-stack features in a **Django** platform including **Elasticsearch** search flows, interactive data visualizations - climate maps, COVID research, poem clustering - using **D3** and **Three.js**, and deployed a **TensorFlow Serving** sentiment API to production

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Go, C++, HTML, CSS, Bash
Frameworks & Libraries: React, Next.js, React Native, Expo, TanStack, Apollo Client, Prisma, Node.js, Django, Three.js, D3
Databases: PostgreSQL, MySQL, MongoDB, Convex
Cloud & Infrastructure: AWS (EC2, S3, Lambda), Azure, Google Cloud Platform (GCP), Vercel, Cloudflare
DevOps / CI/CD: Docker, GitHub Actions, Bitbucket Pipelines, JFrog Artifactory, Linux
AI / Machine Learning: Scikit-Learn, OpenAI API, Anthropic API, PyTorch, TensorFlow
APIs & Data: RESTful APIs, GraphQL, JSON
Testing: Playwright, GraphQL Mocks
Certifications: AZ-900 Azure Cloud Certification
